

Starttte has over 25 years of experience providing leading-edge software, web and technology solutions to commercial, non-profit and government agencies. We specialize in custom application architecture, full-stack web and mobile development, quality assurance and compliance. Our approach combines technical rigor with a deep commitment to usability, ensuring systems are secure, scalable and accessible.

Our team brings deep expertise in technology strategy, software development lifecycle management and digital transformation. Starttte has consistently delivered solutions that modernize operations, improve compliance and elevate user experience.

### Core Technical Services.

Custom Application Architecture and Development	Mobile Development	Front End Web Development	Back End Web Development	Process Improvement
Full-cycle architecture design, systems engineering, and custom application development for complex government and commercial environments.	Native and cross-platform mobile applications optimized for performance, security, and accessibility across iOS and Android platforms.	Responsive, accessible interfaces built with modern frameworks delivering intuitive user experiences across all devices and browsers.	Robust server-side development, API design, database architecture and cloud infrastructure to power scalable, secure web applications.	Technology-driven strategies and workflow optimization to streamline operations and achieve measurable organizational goals.
Quality Assurance (QA)	Section 508/Accessibility Compliance	User Experience (UX) Design	Security and Privacy	Data Visualization
Comprehensive testing strategies including functional, regression, performance and automated testing to ensure reliable, defect-free software.	In-depth 508 testing and remediation as well as WCAG compliance to ensure digital products are fully accessible to users with disabilities.	User research, information architecture, wireframing and usability testing to design cohesive experiences across web, mobile and desktop.	Best practices for FISMA, RMF and HIPAA compliance including PIV/CAC integration, federated logins and security architecture review.	Interactive dashboards, infographics, GIS mapping and analytics tools that turn complex data into actionable insights.
